B1
Cautel

15. (Amended) The article of claim 14, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.

B2
Sub C1

17. (Amended) The article of claim 14, wherein the film is comprised of alternating layers of a first polymer and a second polymer.

18. (Amended) The article of claim 17, wherein the first polymer is selected from the group consisting of PEN and coPEN, and the second polymer is selected from the group consisting of PMMA and co-PMMA.

19. (Amended) The article of claim 17, wherein the first polymer is coPET and the second polymer is selected from the group consisting of PET and co-PMMA.

C1
B3

20. (Amended) An article comprising a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to enable the film to shrink up to about 4% in both in-plane directions upon heating.

21. (Amended) The article of claim 20, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.

22. (Amended) The article of claim 20, wherein the film is heat set at a temperature sufficient to enable the film to shrink at least about 0.7% in at least one in-plane direction upon heating.

Sub C1
B4

23. (Amended) The article of claim 20, wherein the film is heat set at a temperature sufficient to enable the film to shrink at least about 1.0 % in at least one in-plane direction upon heating

24. (Amended) The article of claim 20, wherein the film has a first shrinkage in a first in-plane direction and a second shrinkage in a second in-plane direction, and the first direction is normal to the second direction.

C) 41. (Amended) The article of claim 14 further comprising a first layer of an energy absorbing material.

42. (Amended) The article of claim 20 further comprising a layer of an energy absorbing material.

43. (Amended) The article of claim 41, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.

44. (Amended) The article of claim 42, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.

45. (Amended) The article of claim 41, further comprising a second layer of an energy absorbing material on a surface of the film opposite the first layer of energy absorbing material.

46. (Amended) The article of claim 45, wherein the second layer of energy absorbing material further comprises a shade band layer.

47. (Amended) A laminate comprising the article of claim 45 between two non-planar layers of a glazing material.

48. (Amended) A laminate comprising the article of claim 46 between two non-planar layers of a glazing material.

Add new claims 55-71.

55. (New) The article of claim 20, wherein the film shrinks in the range of about 0.4% to about 3% in both in-plane directions upon heating.

- C1
B7
Control
56. (New) The article of claim 42, wherein the film shrinks in the range of about 0.4% to about 3% in both in-plane directions upon heating.
57. (New) An optically transparent laminate article comprising in the following order: a first substrate, a first layer of an energy absorbing material, a film layer, a second layer of an energy absorbing material, and a second substrate, wherein the film layer comprises a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to render the film capable of shrinking to conform without substantial wrinkling to the non-planar substrates.
58. (New) The laminate article of claim 57, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.
59. (New) An optically transparent laminate article comprising in the following order: a first substrate, a first layer of an energy absorbing material, a film layer, a second layer of an energy absorbing material, and a second substrate, wherein the film layer comprises a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to render the film capable of shrinking up to about 4% in both in-plane directions upon heating.
60. (New) The laminate article of claim 59, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.
61. (New) The laminate article of claim 59, wherein the film shrinks in the range of about 0.4% to about 3% in both in-plane directions upon heating.
62. (New) A vehicle comprising an optically clear laminate article of claim 57.

63. (New) The vehicle of claim 62, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.
64. (New) A vehicle comprising an optically clear laminate article of claim 59.
65. (New) The vehicle of claim 64, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.
66. (New) The vehicle of claim 64, wherein the film shrinks in the range of about 0.4% to about 3% in both in-plane directions upon heating.
67. (New) An optically clear laminate article comprising in the following order: a first substrate, a film layer, and a second substrate, wherein the film layer comprises a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to render the film capable of shrinking to conform without substantial wrinkling to the first and second substrate.
68. (New) The laminate article of claim 67, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.
69. (New) An optically clear laminate article comprising the following layers: a first substrate, a film layer, and a second substrate, wherein the film layer comprises a birefringent dielectric multilayer film that reflects at least 50% of light in a band at least 100 nm wide in a wavelength region of interest, wherein the film is heat set at a temperature sufficient to render the film capable of shrinking in the range of about 0.4% to about 4% in both in-plane directions upon heating.
70. (New) The laminate article of claim 69, wherein the wavelength region of interest is from about 700 nm to about 2000 nm.

- C1
B7
Antel
71. (New) The laminate article of claim 69, wherein the film shrinks in the range of about 0.4% to about 3% in both in-plane directions upon heating.
72. (New) The laminate of claim 67, wherein the first substrate and the second substrate are non-planar.
73. (New) The laminate of claim 69, wherein the first substrate and the second substrate are non-planar.
